OBJECTIVE

Software Engineer specializing in AI/ML and full-stack development, with hands-on experience in facial recognition systems, real-time web applications, REST API design, and cloud deployment. Seeking a software engineering or AI developer role to build scalable, production-ready solutions.

EXPERIENCE

Software Development Engineer Intern – Bluestock Fintech

June 2025 – July 2025

Remote

- Developed a production-grade IPO web application with 8+ REST APIs using React.js and Node.js, serving data to 200+ potential end-users.
- Led a team of 3 developers using Agile workflows, improving sprint delivery consistency and cross-functional collaboration.
- Optimized cloud integration on AWS, reducing API response latency by ~30% through query optimization and response caching.

AI & Cloud Technologies Intern – IBM

August 2024 – September 2024

Remote

- Built 2 Watson-powered chatbot prototypes on IBM Cloud, automating customer query handling and reducing expected manual response load by ~40%.
- Deployed and monitored 3+ AI models through the IBM Watson Studio lifecycle pipeline, reducing prototype-to-deployment iteration time by ~25%.
- Integrated Watson Assistant and Watson NLP APIs into 2 cloud-hosted automation workflows, gaining production-level exposure to IBM Cloud service orchestration.

SKILLS

Languages	Python, JavaScript, Java, C++
Frontend	React.js, Vite, Tailwind CSS, HTML, CSS
Backend Frameworks	Flask, FastAPI, Node.js, Spring Boot
AI / ML	Machine Learning, Deep Learning, Computer Vision, OpenCV, DeepFace, Face Recognition
Databases & Cloud	MongoDB, MySQL, AWS, IBM Cloud
Tools & Concepts	REST APIs, JWT, Docker, Git, GitHub, Capacitor, System Design, OOP, DSA

EDUCATION

Bachelor of Computer Applications, C.S.J.M.U. University

Expected 2026

Axis Institute of Higher Education

CGPA – 8.76/10

Class 12, State Board of Intermediate Education

2021–2022

Kamad Shining Stars Academy

78.33%

Class 10, State Board of Secondary Education

2019–2020

Kamad Shining Stars Academy

88.33%

PROJECTS

Attendify – AI-Powered Smart Attendance System (Web + Android)

Jan 2026 – Present

- Engineered a facial recognition-based attendance system using Python, OpenCV, and DeepFace (ArcFace model), achieving ~95% recognition accuracy across 100+ registered users.
- Built a full-stack solution with React (Vite), Flask, and MongoDB Atlas with JWT authentication, Cloudinary image storage, and real-time attendance logging.
- Deployed as Android APK via Capacitor with camera access and GPS geo-fencing, cutting manual attendance time by ~80%.

WorkWayFinder – Real-Time Employee Location Tracking System

June 2025 – Nov 2025

- Architected a real-time employee location tracking system with React.js, Node.js, and MySQL, supporting live GPS monitoring and role-based access for 50+ simulated users.
- Implemented JWT-based role authentication (Admin/Employee) with secure session management and access-controlled dashboards.
- Designed an interactive Leaflet.js map dashboard for real-time location visualization, reducing manual check-in tracking effort by ~60%.

CERTIFICATIONS

- Technology Job Simulation – Deloitte (Forage), Sep 2025 | Software Engineering Simulation – JPMorgan Chase (Forage), Sep 2025
- Foundational AI & Data Science – IBM, Aug 2024 | Hackathon Participant & Coding Club Lead – 2024–2025 | Volunteer – Code Quest (2024)
